

1. RGM MISSION OVERVIEW

The Rashtriya Gokul Mission (RGM) is implemented by the Department of Animal Husbandry and Dairying (DAHD) as a flagship scheme to enhance bovine productivity sustainably.

The main objective is to promote advanced genetic upgradation across the national cattle population, ensuring multi-fold growth in milk yields and dairy profitability.

Special focus is allocated toward the scientific conservation and propagation of elite indigenous bovine breeds like Gir, Sahiwal, and Red Sindhi.

By adopting state-of-the-art reproductive technologies, the mission aims to transform traditional animal husbandry into a

high-yielding, techno-commercial sector.

Official updates and regulatory circulars can be cross-verified directly on the official [DAHD Website](#).

2. PURPOSE AND OBJECTIVES

The key purpose of RGM is to optimize the productivity of indigenous cattle through systematically planned breeding programs and scientific animal management.

It aims to increase milk production and turn low-yielding scrub cattle into highly productive dairy assets using premium germplasm.

The mission ensures nationwide delivery of high-quality artificial insemination services directly at the farmer's doorstep to expand coverage.

It minimizes production overheads for rural milk producers while maximizing nutritional security and overall farm revenue streams across states.

Complete framework parameters are documented on the official [RGM Portal](#).

3. ELIGIBILITY CRITERIA

Eligibility spans multiple operational tiers, including individual livestock rearers, progressive dairy farmers, rural entrepreneurs, and private agencies.

Institutional eligibility extends to specialized multi-purpose Dairy Cooperatives, District Milk Unions, and progressive State Dairy Federations.

Self-Help Groups (SHGs), Joint Liability Groups (JLGs), and organized Farmer Producer Organizations (FPOs) qualify for targeted component support.

Special financial focus and priority windows are established for smallholder cattle herders, women dairy farmers, and SC/ST farming communities.

Detailed criteria can be analyzed on the statutory institutional desk of the [Department of Animal Husbandry](#).

4. BENEFITS AND SUBSIDIES

Capital subsidy assistance is provided for establishing Gokul Grams and integrated Indigenous Cattle Development Centers to protect native germplasm.

Subsidies are extended for setting up IVF laboratories, sexed-semen production facilities, and modern breed multiplication farms.

Rearers receive financial support for purchasing elite certified high-yielding cows and heifers under the live production-incentive components.

Farmers also benefit from heavily subsidized high-genetic-merit bull semen doses and systemic electronic animal identification tags.

The exact financial breakdown matrices are detailed comprehensively within the current [RGM Guidelines](#).

5. APPLICATION PROCEDURE

Step 1: The applicant evaluates active regional sub-components via their respective State Implementing Agency (SIA) or local Livestock Development Board.

Step 2: A meticulous project proposal or detailed asset application form must be filled out according to prescribed departmental templates.

Step 3: The physical application is submitted either to the block-level Veterinary Officer or directly via the notified state dairy portal.

Step 4: Field technical officers conduct structural verification, validate cattle holding records, and authorize immediate benefit disbursement.

Detailed process workflows and tracking channels are actively accessible via the official online [DAHD Hub](#).

6. REQUIRED DOCUMENTATION

Beneficiaries must furnish valid e-KYC documents, including Aadhaar cards, active bank account details, and passport-size photographs.

For farm infrastructure expansion, verified land ownership records, long-term lease deeds, and local civic NOC certificates are required.

Detailed Project Reports (DPRs), bank term-loan sanction letters, and technical equipment quotations must be attached for infrastructure grants.

Livestock records, registered breed certificates, and active herd vaccination cards must be provided for direct genetic-upgradation benefits.

All document templates can be downloaded directly from the active reference library of the [RGM Documents Section](#).

7. FREQUENTLY ASKED QUESTIONS

What is RGM? A national mission focused on development, conservation, and genetic upgradation of indigenous bovine breeds to increase milk production.

Who can benefit? Individual cattle herders, large dairy farmers, private companies, startups, and multi-tier cooperative dairy societies.

How can dairy cooperatives participate? Cooperatives can establish breed multiplication farms or serve as local artificial insemination delivery hubs.

Where should I apply? Applications must be routed via the State Livestock Development Board or local district animal husbandry

offices.

For resolving queries, refer to the FAQ database on the [DAHD Official RGM Page](#).
