

INTRODUCTION TO BLUE REVOLUTION

The Blue Revolution, officially known as the **Neel Kranti Mission**, was conceptualized to drive intense growth across India's aquaculture sector.

Launched originally during historical Five-Year Plans, the scheme focused on full utilization of country **water resources** for sustainable fisheries development.

The scheme prioritized the **economic prosperity of fishers, fish farmers**, and targeted long-term domestic nutritional security requirements.

It laid down the structural foundational framework for transforming traditional

catching methodologies into professional, modern industry formats.

CHAPTER 2: PURPOSE **AND CORE OBJECTIVES**

The program supported extensive **development of fisheries infrastructure**, productivity improvements, and overall value-chain expansion.

Key focus areas included augmenting **fish breeding technologies**, establishing **modern hatcheries**, and optimizing **inland water** resources.

It aimed to double the income of fishers by introducing scientifically verified aquaculture and deep-sea capture methodologies.

The framework incorporated robust bio-security protocols, intensive resource mapping, and environmental mitigation strategies nationwide.

Detailed guidelines on ecosystem management can be checked directly on the official dashboard hosted at the [National Fisheries Development Board]

CHAPTER 3: ELIGIBILITY **& BENEFICIARIES**

Eligibility parameters traditionally varied across different active sub-components and localized implementing agencies.

Primary beneficiaries included traditional fishers, fish farmers, tribal fishers, and coastal community groups.

Structured organizations such as Fisheries Cooperative Societies, Primary Agricultural Credit Societies, and Self-Help Groups qualified.

Private agri-entrepreneurs, progressive fish breeders, and corporate entities engaged in deep-sea aquaculture were also accommodated.

For complete historical criteria updates, consult the documentation available on the official platform at the [Department of Fisheries Portal](<http://dof.gov.in/>).

CHAPTER 4: FINANCIAL SUPPORT & BENEFITS

Financial assistance provided crucial capital subsidies for constructing new ponds,

upgrading craft, and installing aeration machinery.

Special financial brackets offered higher percentage subsidies for vulnerable groups, specifically prioritizing scheduled castes, tribes, and women.

The scheme covered post-harvest logistics infrastructure including ice plants, cold storage setups, and insulated transit vehicles.

Welfare components integrated direct saving-cum-relief mechanisms, insurance policies, and basic community infrastructure grants.

Current subsidy frameworks are systematically mapped on the operational finance pages at the [myScheme

Portal](<https://www.myscheme.gov.in/>).

CHAPTER 5: STEP-BY-STEP TRANSITION ROADMAP

Step 1: Applicants must evaluate active sub-schemes by checking online notices on the state fisheries department portal.

Step 2: Formulate a comprehensive project proposal highlighting location, investment layout, and anticipated fish production metrics.

Step 3: Submit the completed documentation package directly to the localized District Fisheries Officer for technical validation.

Step 4: The proposal undergoes formal

verification by the District Level Committee prior to budget allocation and administrative sanction.

To access updated digital application forms, visit the centralized portal hosted at the [Department of Fisheries India](<http://dof.gov.in/>).

CHAPTER 6: REQUIRED CHECKLISTS & DOCUMENTS

Point 1: Valid identity proofs including Aadhaar card, voter identification, or cooperative registration certificates.

Point 2: Certified land records, ownership title deeds, or long-term lease agreements for the aquaculture site.

Point 3: Detailed Project Report outlining

capital expenditure, operational cash flow, and engineering designs.

Point 4: Verified active bank account passbook details alongside an official non-duplication subsidy affidavit.

Download official standard templates directly from the guidelines repository at the [National Fisheries Development Board](<http://www.nfdb.gov.in/>).

CHAPTER 7: LEGACY CONTEXT & MODERN FRAMEWORKS

What was the Blue Revolution?

It was the foundational centrally sponsored scheme that concluded its operational

tenure in March 2020.

Which current fisheries programme should I use now?

All ongoing components have been consolidated into the Pradhan Mantri Matsya Sampada Yojana.

The new flagship umbrella scheme carries forward the mission objectives with an expanded nationwide financial allocation of over twenty thousand crores.

Eligible stakeholders are directed to transition their planning frameworks toward the active operational guidelines of the new scheme.

Access complete current operational structures on the live portal at the [PMMSY

Official Website](<https://pmmsy.dof.gov.in/>).
