

1. SCHEME OVERVIEW

The Central Sector Integrated Scheme on Agricultural Cooperation (CSISAC) is a major initiative by the Government of India.

It is run under the Ministry of Cooperation to help build a strong financial and operational framework for cooperatives.

2. CORE PURPOSE

The primary goal is to provide institutional backing to national and state-level cooperative federations and societies.

It works by financing storage facilities, processing plants, cold chains, and full digital transformation of smaller rural cooperative setups.

3. ELIGIBILITY CRITERIA

Cooperative institutions must be officially registered under the State or Multi-State Cooperative Societies Act.

An active operational track record of at least three financial years along with positive net worth and audited books is mandatory.

4. BENEFITS AND GRANTS

Eligible entities receive term loans directly from NCDC and customized capital subsidies matching their home state classification.

Subsidies range from fifteen percent in advanced regions up to twenty-five percent for under-developed or tribal regions.

5. REQUIRED DOCUMENTS

Societies must submit their registration certificate, verified bye-laws, and audited financial profiles of the past three fiscal years.

A detailed project report or business plan detailing the economic viability and infrastructure usage is strictly required.

6. IMPLEMENTATION STEPS

1. Formulate a comprehensive project report outlining the financial projection, physical requirements, and cooperative site details.
2. Submit your proposal documentation through the NCDC web portal or forward it via your respective state registrar department.
3. Complete the mandatory field evaluation and verification process conducted by local designated monitoring and technical experts.

7. CAPACITY BUILDING

The framework fully finances human resource training, upskilling, and professional development via specialized national cooperative training councils.

It also operates internship programs to onboard young professionals into agricultural management sectors to streamline modern processes.
