

1. Programme Type

The Shyama Prasad Mukherji Rurban Mission (SPMRM) is a rural cluster infrastructure development programme.

It acts as a strategic planning framework to transform rural areas into economically vibrant and well-serviced clusters.

2. Mission Purpose

The main objective is to develop integrated rural clusters with urban-like economic, social, and infrastructure amenities.

This holistic development aims to stimulate local economic growth while deliberately retaining the fundamental rural character of the region.

3. Eligibility Criteria

This is a cluster-based government planning and development model.

Unlike routine welfare schemes, it does not provide individual or household cash benefits.

Eligibility is defined by village clusters demonstrating high economic potential and specific demographic criteria designated by state authorities.

4. Benefits and Support

The mission delivers heavily improved infrastructure, high-quality public services, and diversified economic opportunities at the cluster level.

Key focus areas include digital connectivity, 24/7 water supply, smart education facilities, upgraded sanitation, and local entrepreneurship hubs.

5. Documents and Data

Administrative requirements include detailed cluster profiles, village maps, and specific location data.

Citizens or local bodies can access public records, cluster selection criteria, or submit inquiries via official development information requests.

6. Execution Procedure

1. Selection of potential rural clusters based on state-specific parameters like population and growth drivers.
2. Formulation of an Integrated Cluster Action Plan (ICAP) detailing baseline data and local requirements.
3. Review and approval of the ICAP by the State Level Empowered Committee (SLEC).
4. Submission of approved plans to the Ministry of Rural Development for funding allocation.
5. Mobilization of resources through convergence of existing central and state

welfare schemes.

6. Final execution of infrastructure projects through designated state, district, and cluster-level planning structures.

7. Official Source

The scheme is centrally managed under the Ministry of Rural Development family of programmes.

All updates, spatial planning tools, and framework definitions are issued in coordination with allied-ministry infrastructure schemes.
