

1. MISSION ANTYODAYA

PURPOSE

Mission Antyodaya is a flagship rural development convergence initiative spearheaded by the Ministry of Rural Development, Government of India.

The primary purpose of this mission is to optimize and combine budgetary allocations across multiple central ministries and departments to bring measurable outcomes.

It seeks to shift the focus of governance from mere financial expenditures to actual, visible, and quantifiable development outcomes at the ground level.

By aligning various schemes, the program ensures that resources are pooled together to maximize impact and avoid duplication of development works.

2. CORE ELIGIBILITY **FRAMEWORK**

Unlike traditional welfare schemes, Mission Antyodaya does not operate as an individual cash-benefit application framework for single citizens.

The eligibility and operational parameters are applied directly at the village, cluster, and macro Gram Panchayat tier nationwide.

All 269,253 Gram Panchayats across India are included under this administrative and monitoring framework to assess infrastructure gaps universally.

The official portal for tracking performance scores can be accessed via the Mission Antyodaya Dashboard.

3. SCHEME BENEFITS AND PLANNING

The mission provides data-driven tools to identify critical infrastructure and social development gaps in individual rural habitations.

It enhances evidence-based planning by generating a multi-dimensional report card for each assessed local government body.

This scientific data helps district authorities channel financial resources specifically toward the most deprived sectors and communities.

Academic research and training supports for this convergence model are continuously published by the NIRDPR Documentation Hub.

4. STEP-BY-STEP SURVEY METHOD

The implementation begins with a massive countrywide baseline and annual evaluation survey to measure parameters across rural blocks.

The survey is conducted concurrently with the People's Plan Campaign under the direct supervision of the Ministry of Panchayati Raj.

Gram Panchayat functionaries collect real-time data on 29 critical economic and social development subjects outlined in the Constitution.

The field data gathered through this process is presented before open Gram Sabhas for public validation, editing, and approval.

5. DATA VERIFICATION METRICS

Field enumerators use a specialized mobile tool named the Mission Antyodaya Application to log data directly.

The parameters are split across physical infrastructure, human resource development, social security nets, and economic diversification indicators.

Every data point is strictly cross-verified with central databases like SECC 2011 to ensure absolute precision and remove false reporting.

The application scores are compiled into a comprehensive index ranging from 0 to 100 points to rank Panchayats universally.

6. MANDATORY INTEGRATION DATA

The gap report cards generated from the survey are mandatorily integrated into the Gram Panchayat Development Plans (GPDP).

This integration mandates that local planning committees must allocate their funds to resolve the highest-ranked gaps first.

By locking development goals to factual indices, the system eradicates arbitrary fund allocation and curbs corrupt local practices.

Official administrative notifications and policy adjustments are periodically updated through the Press Information Bureau.

7. STRATEGIC SCHEME

QUESTIONS

Citizens often ask: What is Mission Antyodaya? It is an accountability and convergence framework to maximize rural development efficiency.

How is my Gram Panchayat assessed? It is scored annually through a field survey checking road links, electricity, banking, and sanitation.

Where can I see the live development indicators? You can search public summaries on portals like the Vikaspedia Information Portal.

The mission ensures that every rupee spent by the state directly translates to the upliftment of the most vulnerable rural households.
